Z Regalsystem

Moderne Lösungen für Stauraum sind trotz zunehmender Digitalisierung des Alltags in hohem Maße gefragt. Ob schwere Fachbücher, stetig wachsende Stapel von Zeichnungen und Zeitschriften, Vasen und Gefäße oder auch Geschirrstapel – vieles lässt sich auf den 1,50 m langen Tragflächen wirkungsvoll in Szene setzen. Die blitzförmige Anordnung der Stützen und die seitlich kragenden Böden machen das Regal zu einer besonderen, konstruktiv überzeugenden und hoch belastbaren Einheit. Erweiterbar zu beiden Seiten, über Eck und in der Höhe lassen sich vielfältige individuelle Lösungen umsetzen – zeichenhaft und nützlich zugleich.

Das Z Regalsystem lässt sich freistehend als Raumteiler in Büroräumen mit maximal vier Böden aufstellen. Steht ein Regalmodul an der Wand, sollte es immer mit Wandhaltern gegen Kippbewegungen gesichert werden. Wir empfehlen, ein wandstehendes Basisregal mit maximal vier Regalböden zu erweitern. Ein Boden kann bei gleichmäßig verteilter Last mit bis zu 50 kg und das Basisregal mit bis zu 350 kg belastet werden. Vielfältige Zusatzteile wie Buchstützen, Reihen- oder auch Eckverbinder vervollständigen das Regalsystem.

Die Regale werden aus lasergeschnittenen Stahlblechen und Profilen hergestellt und mit einer hochwertigen Pulverbeschichtung versehen. Diese Beschichtung verleiht den Regalen eine abriebfeste und unempfindliche Oberfläche, die mit einem weichen Tuch leicht zu reinigen ist.

Z Shelving System

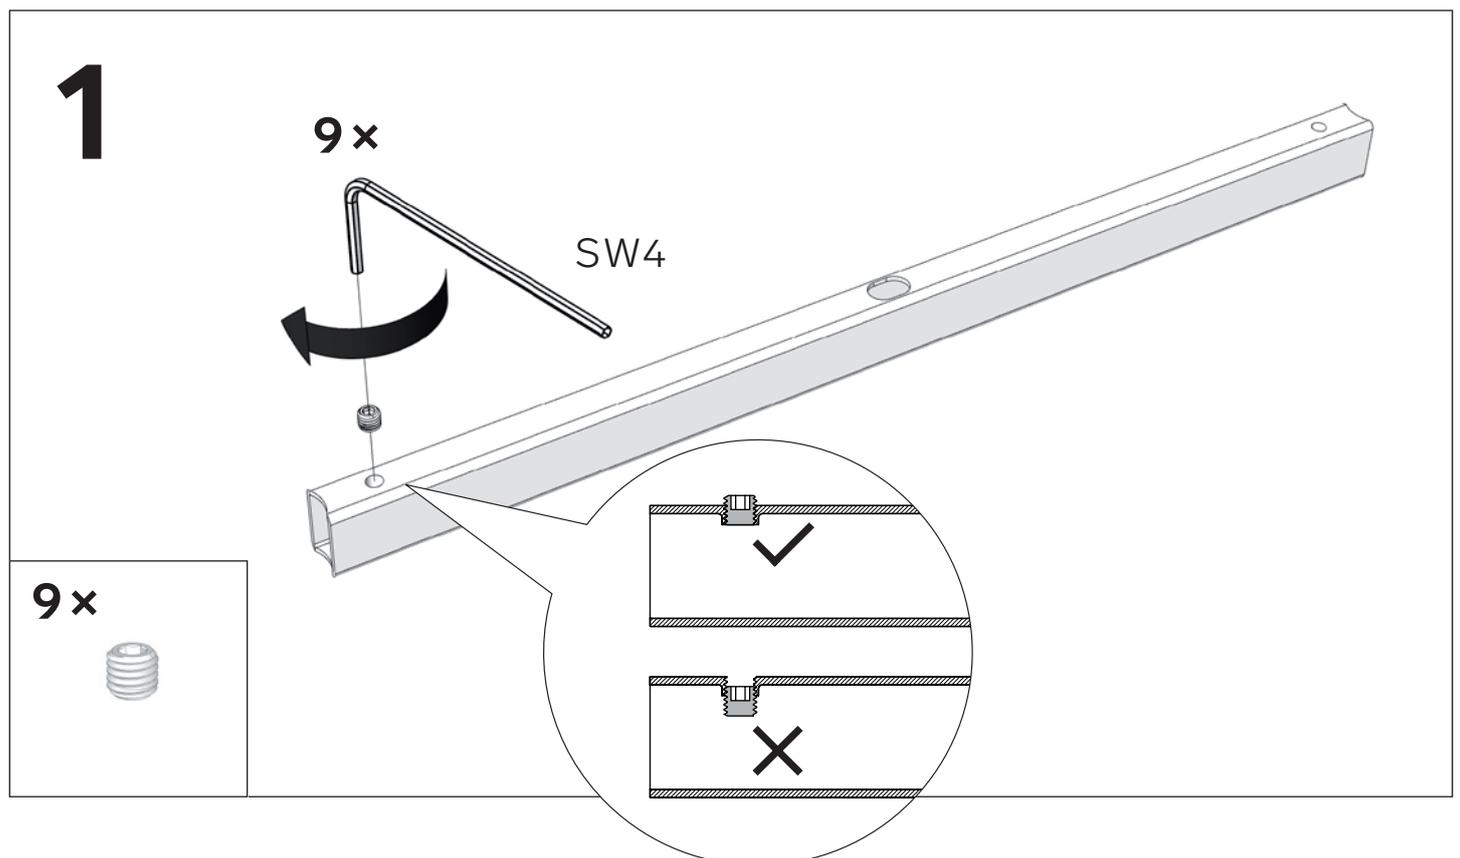

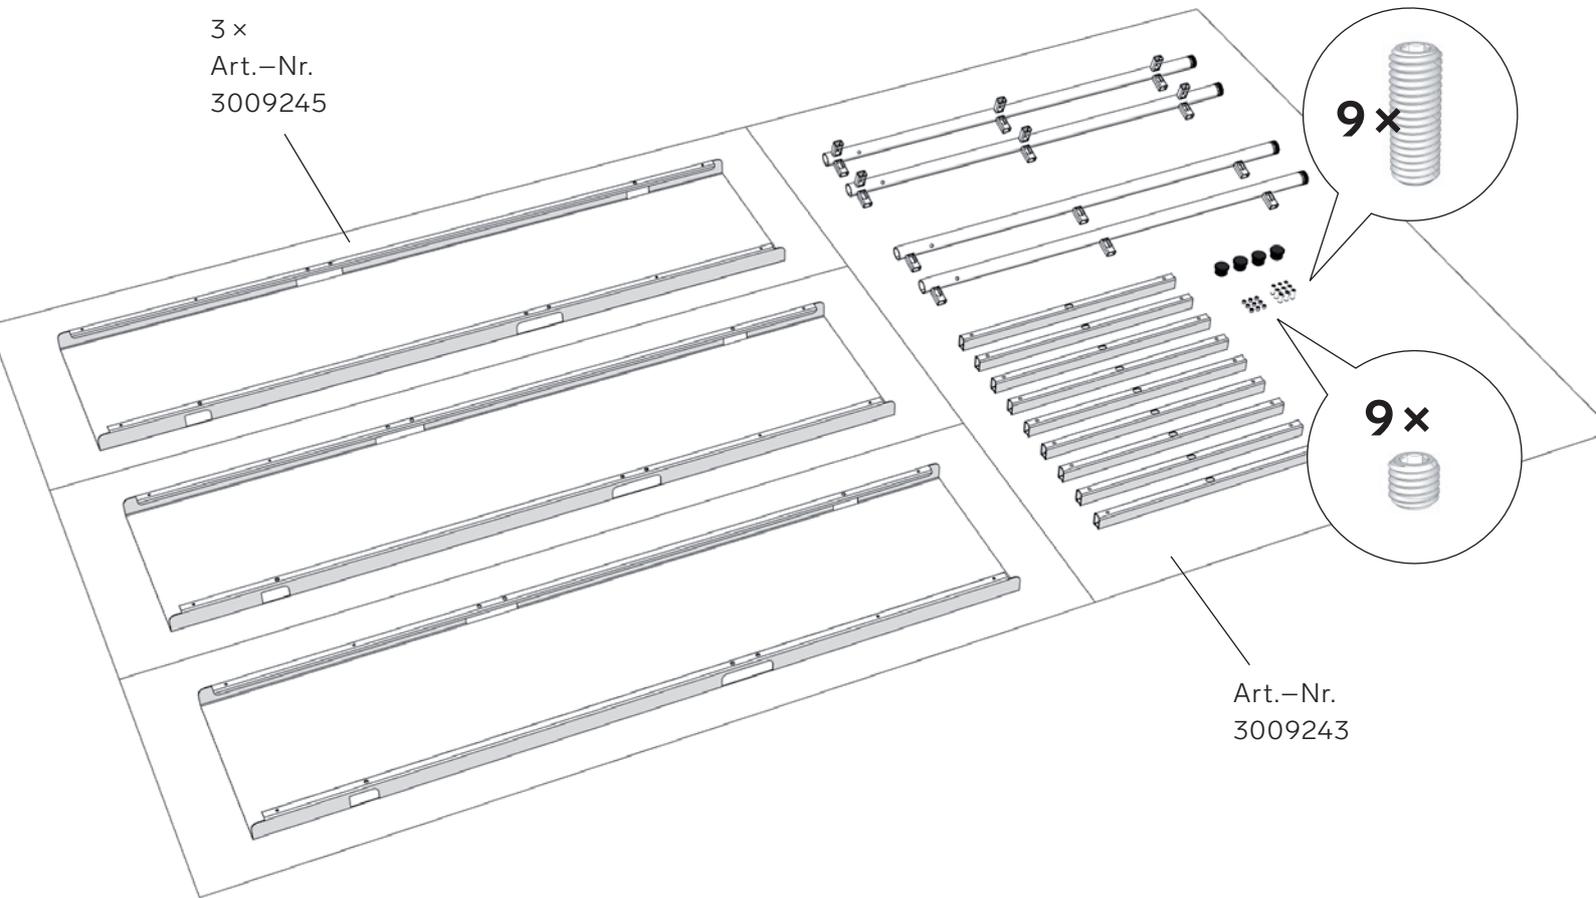

Despite the increasing digitalization of everyday life, modern solutions for storage space are in high demand. Whether heavy technical books, constantly growing stacks of drawings and magazines, vases and vessels or even stacks of dishes, much can be staged impressively on the 1.50 m long wings. The lightning-shaped arrangement of the pillars and the laterally projecting shelves make the shelf a special, structurally effective and highly resilient unit. Expandable on both sides, around corners and in height, a wide variety of individual solutions can be implemented – emblematic and useful at the same time.

In offices, the Z shelving system can be set up as a free-standing room divider with a maximum of four shelves. If a shelving module is standing against the wall, it should always be secured against falling over with wall brackets. We recommend extending a wall-mounted basic shelf with a maximum of four shelves. A single shelf can be loaded with up to 50 kg with an evenly distributed load and a basic shelf with up to 350 kg. Various additional parts such as bookends, row or corner connectors complete the shelving system.

The shelves are made of laser-cut steel sheets and profiles and they are provided with a high-quality powder coating. This coating gives the shelves an abrasion-resistant and insensitive surface that is easy to clean with a soft cloth.
